CLEVER
CONTRACT INTELLIGENCE

21 September 2026

Intellectual property and confidentiality

This document states who owns the contracts you upload, who owns the analysis produced from them, what belongs to CLEVER, and how both sides treat what they learn about each other.

Subject	Who owns it
Uploaded contracts	You. No transfer of rights, no training
Analysis and exports produced	You, as work product
Risk register (401 + 97 entries)	CLEVER, provided for use
Assessment logic and thresholds	CLEVER, provided for use
Software and wording templates	CLEVER, provided for use
Access for troubleshooting	occasion-based; deletions and locks logged
Deletion on request	complete, confirmed in writing

— Your contracts stay yours

Dr. Jürgen Tiedge acquires no rights whatsoever in the contracts you upload. They remain your property and your trade secret. We do not use them to train models, not as an example, not in presentations, not anonymised.

The provider of the language model, Anthropic, does not train on them either. Its commercial terms exclude this (Commercial Terms of Service, section B).

— The analysis is yours too

The risk positions, assessments, counter-formulations and exports that CLEVER produces from your contract are your work product. You can take them with you at any time as a Word or Excel file. No lock-in to the tool arises from this.

— What belongs to CLEVER

The seller-side risk register with 401 entries and the buyer-side register with 97, the assessment logic, the thresholds, the software and the wording templates are the intellectual property of Dr. Jürgen Tiedge. They are provided for use, not transferred.

— Confidentiality in both directions

We treat every contract you entrust to us as confidential. We expect the same for what you learn about how CLEVER works. We are happy to sign a mutual confidentiality agreement before the first upload.

— What we see

For operation and troubleshooting, Dr. Jürgen Tiedge can access the database. With a tool of this kind this is unavoidable, and we prefer to say so rather than hide it in a footnote. Such access is occasion-based. Deletions and locks are logged; there is currently no separate log of read access by the operator. If you do not want this, operation in your own environment is the right path.

— When the collaboration ends

At your request we delete your entire portfolio — contracts, analyses, logs — and confirm it in writing. Beforehand, you export whatever you wish to keep.

This document is a statement of intent, not a contract. Binding terms are set by the agreement between the parties. · Dr. Jürgen Tiedge · clever-ai.org
